### Registration

*\* Registration will end by 8 April 2022 or earlier when the seats are filled up.*

*\*\* Please register [here](#) or email [sales@cairnhill.com](mailto:sales@cairnhill.com) with your details.*

## Portable Metrology for Immediate Productivity Improvements

### Latest Ground-breaking Solutions from Hexagon

Get ready for the next generation of non-contact 3D inspection scanning! See for yourself how Hexagon's latest ground-breaking solutions make any scanning task possible, from reverse engineering of single parts to large part inspection.

Cairnhill Metrology welcomes you to our first physical seminar in Singapore since the Covid pandemic, supported by *Hexagon (Manufacturing Intelligence Division)*. We are excited to invite you live on-site to see the latest ground-breaking solutions for your non-contact 3D inspection needs!

Introducing the **Absolute Scanner AS1**, which is the flagship market-leading 3D laser scanner for the Absolute Tracker AT960 and Absolute Arm 7-Axis systems, with ground-breaking modular cross-platform technology concept without the need for realignment when switching.

The first ever direct scanning **Laser Tracker ATS600** can accurately locate a point in 3D space with metrology-grade accuracy without the need for a reflector at the point of measurement! It delivers impressive all-round performance for large-scale measurement tasks, with scanning quickly describing surfaces and individual reflector readings used for alignment and defining features.

Our demo systems are also available for separate live demonstration sessions at our *Metrology Applications Centre*. For existing portable arm users, our certified calibration labs in the region can perform full calibrations, verification and preventive maintenance on your systems.

### About our Speaker

With 14 years of experience with Hexagon's portable solutions, **Sean Koh** has seen many improvements made to the systems and is involved in many activities such as sales, support, training and integration of Hexagon's metrology solutions in Singapore and around the region.
